

Drug Safety & Pharmacovigilance Report

1. Adverse Event Summary Q1 2026

Total adverse events reported: 47 cases.

Serious adverse events: 8 cases (all reported to regulatory authority within 15 days).

Most common: GI reactions (12 cases), hypoglycemia (8 cases), allergic reactions (7 cases).

2. High-Risk Drug Monitoring

Warfarin: 45 patients on therapy, 38 (84%) within therapeutic INR range 2.0–3.0.

Insulin: 78 patients, 3 severe hypoglycemia events recorded.

Digoxin: 12 patients, all with serum levels within range 0.5–2.0 ng/mL.

IF INR > 4.0 THEN hold warfarin, notify physician, consider Vitamin K.

3. Drug-Drug Interaction Alerts

System generated 234 DDI alerts in Q1; 89 overridden by physicians.

Override rate >40% triggers pharmacy review.

Critical DDI (never override): aminoglycosides + vancomycin, warfarin + NSAIDs.
